From outsourcing to ownership.

Trilogy GCC allows you to move beyond outsourcing. Design, Build, Innovate, Transfer — your risk-mitigated roadmap to a fully-owned Center of Excellence in South Africa.

Establish a Global Capability Center in South Africa that functions as a seamless extension of your headquarters — transitioning from third-party dependency to a fully-owned global asset.

- Build your own capability center in South Africa.
- DBIT assists international BPO or enterprise companies to establish global capability centers in South Africa.
- Global capability centers or captives provide between 20%–30% cost savings versus offshore outsourcing.
- Trilogy also offers a unique digital and autonomous platform to reduce headcount.

South African Footprint

Trilogy GCC's footprint has more than 1,000 FTEs across Cape Town, Johannesburg, with the majority in Cape Town, across two sites. Every site is Trilogy GCC owned or leased and operated directly, never via franchise or affiliate. This offers an advantage where your current operation is in Cape Town. Your operation will fit seamlessly into our current operations, offering stability and risk mitigation associated with a new site.

Four physical sites across Cape Town and Johannesburg, plus a national WFH continuity layer (not plotted — distributed).

Figure — South African Footprint: Mutual Park & Century City (Cape Town); Rosebank Quarters & Maharishi Institute (Johannesburg)

- **Mutual Park, Cape Town** — Old Mutual Park, Pinelands. Active, primary UK-client site. 5-star green-energy campus; scalable to 1,000+ seats.
- **Century City, Cape Town** — Century City. Active. 150+ FTE; scalable to 300 within 24 months.
- **Rosebank Quarters, Johannesburg** — 158 Jan Smuts Avenue, Rosebank. Active. 200+ FTE; scalable to 400 within 24 months.
- **Maharishi Institute, Johannesburg** — 9 Ntemi Piliso Street, Johannesburg CBD. Active. 100+ FTE; 750+ pre-assessed graduate pipeline per year.
- **National WFH continuity layer** — nationwide (distributed). Active. 40–60% cloud-first from home for flex and BCP.

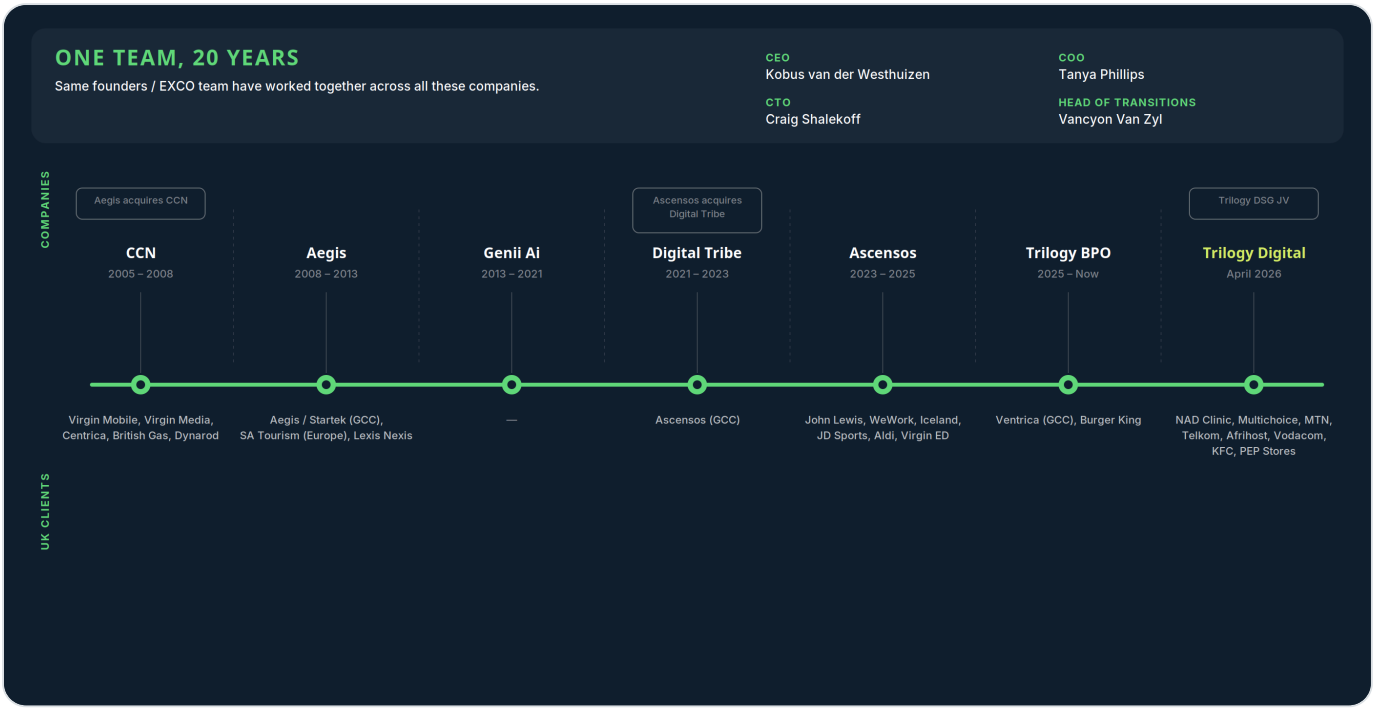

Relevant UK & US Client Experience

Our leadership team has transferred, deployed and managed multiple operations in Cape Town, South Africa from inception. We also provided CX programmes for globally recognised UK brands including John Lewis & Partners, British Gas, Vodafone UK and Aldi UK. Our operational and HR (People) experience is aligned with your UK and US requirements.

All our lessons learnt during these transitions, including job profiling, recruitment strategies and transferring of knowledge, provide us with a unique opportunity to leverage this experience and position ourselves as your ideal partner of choice.

We understand the importance of retaining competence and tenured staff and key individuals, including those in positions of operational leadership. We know our ways of working to be effective in delivering a tangible employee value proposition and believe our ways of working, including our core values, are closely aligned to those of your business. The investment made to date will not be lost, as we have significant experience in transitioning work between operators and core expertise in managing the change associated with the change of employer as a going concern.

Management Journey & UK Client Experience

We feel confident that together we can transition the existing operation effectively, minimise risk and craft a long-term delivery strategy focused on elevating your customer experience, leveraging AI where appropriate, and building a partnership that creates true bi-directional value for both parties.

Brands Our Leadership Has Delivered For

25+ years each behind the world's brands.

With 25+ years of experience each, Trilogy's leaders have built and managed 30+ contact centres worldwide for some of the world's most recognised brands. That gives us insight into the challenges and opportunities of offshore customer-service delivery, with deep vertical expertise across telecommunications, utilities, retail, fast food, insurance and technology.

02 Why Cape Town / Why South Africa

THIS SECTION COVERS

1	Why South Africa
2	Why Cape Town
3	Why the Location Wins
4	Sights in and around Cape Town

Why South Africa?

South Africa has consistently been ranked the second most attractive Business Process Outsourcing location globally, after consecutive years of high performance. Source: McKinsey.

Why Cape Town

South Africa — and Cape Town in particular — is one of the world's premier destinations for UK-facing customer experience delivery. It combines deep English-language and UK cultural alignment, a mature BPO ecosystem, favourable time zones and compelling cost advantages, all without the quality trade-offs associated with other offshore markets.

Why the Location Wins

- **BPO ecosystem leadership** — Cape Town has led South Africa's BPO export performance for nine consecutive years, drawing on a 67,000-strong regional BPO workforce with established English-language and UK-cultural alignment.
- **Operational readiness** — sites are live today; no site setup phase, landlord negotiation or infrastructure lead time.
- **ESG alignment** — our flagship site holds a 5-Star Green Energy rating from the Green Building Council South Africa (GBCSA).
- **Premium infrastructure** — multi-redundant fibre, N+1 generator and UPS power resilience, and biometric access control.
- **Multi-site resilience** — the network spans Cape Town and Johannesburg, eliminating single geographic points of failure and enabling live volume routing between sites.
- **Time-zone synergy** — GMT+2 offers just a 1–2 hour difference with the UK and extended coverage for USA programmes.

Sights in and around Cape Town

Cape Town's lifestyle and natural beauty are a genuine magnet for talent — Table Mountain, the Atlantic seaboard, the Winelands and the Cape Peninsula all sit within easy reach of our sites.

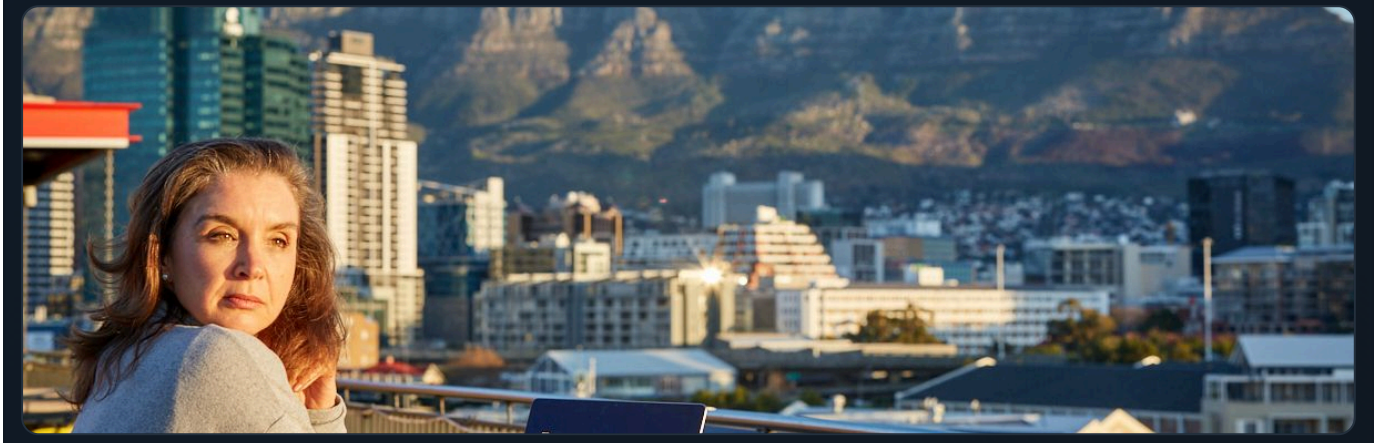

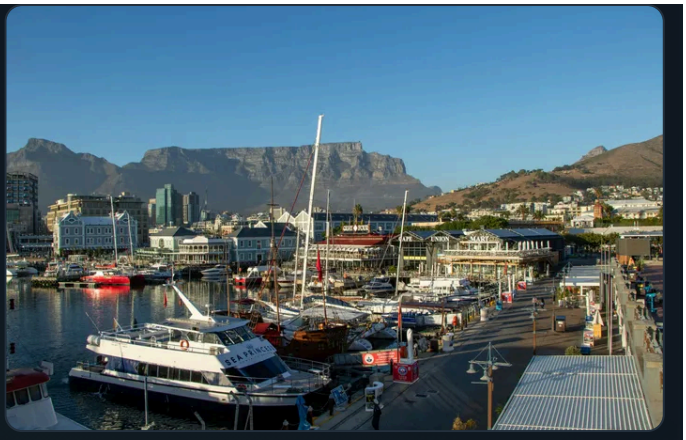

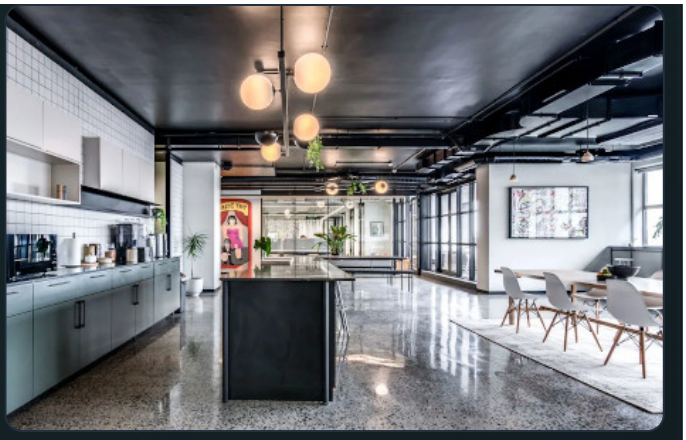

Sights in and around Cape Town — lifestyle that attracts and retains talent.

03 Global Capability Centres

Own Your Offshore Operation — Offshoring Without the BPO Tax.

For organisations seeking maximum control and long-term cost optimisation, building your own capability centre in South Africa represents the ultimate strategic move. With Trilogy's DBIT methodology, you can establish a fully operational centre with confidence, backed by our decades of local-market expertise.

Global Capability Centres provide 20–30% cost savings compared to traditional outsourcing while giving you complete ownership and control over operations, technology choices and strategic direction. We handle the complexity of setup, compliance and local regulations so you can focus on growing your business.

3	Team + experience
4	Cost Evolution
5	Case studies
6	Commercial models

The Challenge — Traditional BPO Savings Stop at Labour Arbitrage

The traditional BPO model contains a structural flaw: providers earn margin based on headcount. Every agent represents recurring revenue, so when automation reduces staff requirements it directly reduces the provider's income. This creates a powerful disincentive to innovate — BPOs are economically motivated to maintain, not reduce, your agent count.

A further barrier lies between the company's in-house IT systems and security protocols and a BPO trying to access those systems — historically a blocker to RPA, innovation and technology integration. Migrating your offshore BPO operation to an offshore captive unlocks this further cost-reduction opportunity and removes the barriers to innovation.

> *Bottom line: if a supplier makes less money when you automate, they will never automate fast enough.*

Our Solution — Flipping the Incentive Structure

Trilogy enables you to own your offshore operation outright. This isn't traditional outsourcing — it's a structured pathway to building and controlling your own Global Capability Centre in South Africa, with aligned incentives from day one.

You Employ the Staff

Your employees work for your entity, following your culture, processes and standards — complete operational control without vendor intermediation.

100% Open-Book Costs

Full transparency into every operating expense. No hidden markups, no black-box pricing — you see exactly where every rand is spent.

Fixed Management Fee

Our compensation is decoupled from headcount. We earn the same whether you run 100 agents or 50 — so we are incentivised to help you optimise.

Savings Accrue to You

Every efficiency improvement, automation win and headcount reduction flows directly to your bottom line, not a vendor's margin.

> *This is offshoring without the BPO tax — you capture 100% of the value creation.*

The DBIT Methodology — Design, Build, Innovate & Transfer

Design	Build
We architect your operating model, technology stack and organisational structure around your specific service-delivery requirements and growth trajectory.	We stand up the full operation — recruitment, training, facilities, technology implementation, compliance and governance frameworks.

Innovate	Transfer
We actively reduce required headcount through digital deflection, intelligent routing, automation and AI-assisted resolution — because we are not paid on heads.	We transition full operational ownership to your team when you are ready, with ongoing support as needed.

How DBIT Works — A Phased, Holistic Build

The success of a GCC migration depends on proper planning and implementation of a holistic project — not a facilities fit-out on its own. DBIT covers every layer of the operation:

Strategic & Operational Objectives

Business case, migration strategy, project plan, deliverables and a risk matrix with mitigation from day one.

People, Culture & Brand

HR and people plan (including Section 197 where required), recruitment, training, and your culture transferred into the South African centre.

Management Practices

Management processes, practices and systems, plus MI/BI so the captive is measurable from go-live.

Process Optimisation & Innovation

Process mapping, design and optimisation — then digital and autonomous innovation once the operation is stable.

Platform & Facilities

Site build-out, connectivity and a fully kitted floor, delivered to your design specification and branding.

Technology & Innovation

Systems integration, data security, disaster recovery, and global plus local best-practice baked into the stack.

Design Phase

We complete an exhaustive migration plan before anything is stood up — so localisation risk is designed out, not discovered at go-live.

The plan includes

- Comprehensive business case
- Due diligence and requirements specification
- Migration strategy and plan objectives

- Project plan and deliverables
- Risk matrix and mitigation plan
- HR & people plan (Section 197)

Functional coverage

- Process mapping, design and optimisation
- Technology, connectivity and data security
- Systems and process integration
- Facilities, recruitment and training
- Management information and business intelligence
- Disaster recovery and best-practice integration

Build & Operate

This phase migrates a BPO operation to a captive — People, Process, Technology and Facilities together. Trilogy supports the captive management team with local know-how, experience, project management and change management through go-live and the operate period that follows.

Design & Build for Purpose

The operation is built to the design specification and branding — not a generic BPO floor with your logo added later.

OPEX vs CAPEX

No CAPEX is required for the build-out. Trilogy offers a fully kitted operation to spec on a monthly OPEX commercial model, or a CAPEX path if you want to own the infrastructure.

Vendor Management

Tried-and-tested vendor ecosystem. We manage quality and budgets — vendor negotiation is how cost and quality stay in balance.

Project Management

Experienced project management to an on-time go-live. When so many workstreams have to land on one date, this function is critical.

Innovate & Transfer

Once SLAs, KPIs and quality metrics are stable, innovation starts. Trilogy helps the company innovate against its strategic objectives — an agile process that aligns internal teams to the

plans and projects in this phase. Innovation covers process, technology, people and customer opportunities. Trilogy CX acts as instigator, collaborator and manager, helping internal teams Design, Configure, Deploy, Test and Improve.

In Transfer, operations, technology, facilities, people, management and knowledge move to the company — with project and change management, and the professional services needed for a clean handover of the people required.

> *Who DBIT is for: in-house operations that want to maximise cost without paying outsourced rates; already-outsourced operations at maturity that are ready to own the centre; and organisations that want the extra savings of digital and autonomous customer service.*

Same Customers

Your brand, your customer relationships, your service standards.

Same SLAs

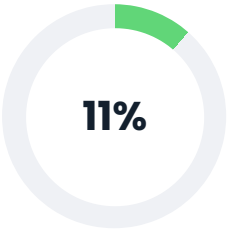

Meeting or exceeding your current service-level agreements.

Better Economics

Fewer people, lower cost, full control.

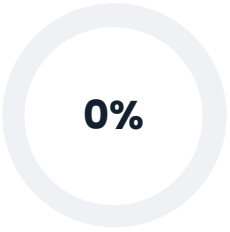

The Benefits of DBIT

Building your own capability centre through DBIT delivers advantages across multiple dimensions — beyond cost savings, you gain strategic control, operational flexibility and the freedom to innovate without constraints.

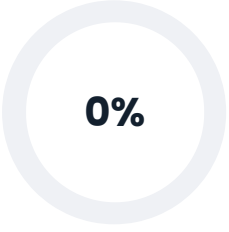

Cheaper Than Onshoring

Achieve 50–60% cost savings compared to maintaining operations in high-cost markets while accessing the same quality talent and capabilities.

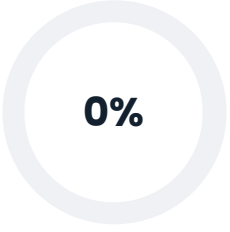

Cheaper Than Outsourcing

Global Capability Centres provide 20–30% additional savings compared to traditional BPO outsourcing by eliminating vendor margins and overhead.

Further Savings Through Deflection

Implement aggressive automation, digital deflection and AI strategies without restrictions, driving an

More Control

Maintain complete ownership and control over operations, technology decisions, data security and strategic

additional 15–20% cost reduction over time.

direction — critical for long-term competitive advantage.

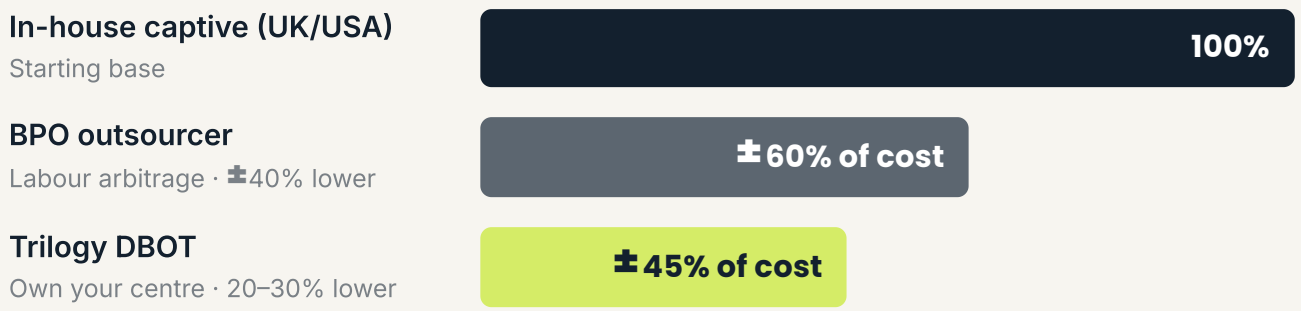

Incubator / DBIT Roadmap

Evolve your model as you grow — from an outsourced operation to your own contact centre, with management control and risk mitigation at every step.

COST EVOLUTION

Cost path from an in-house captive to a GCC.

Start at 100% UK/USA cost — then compound reductions as maturity rises. Midpoint model: labour arbitrage, then GCC ownership, stacking on the same cost base — from 100% in-house UK/USA down to ±45% of cost.

Percentages shown as share of in-house UK/USA operating cost, using the midpoint of each range above; each saving applies to the stage before it. Typical end cost ±45% of in-house.

Each stage drives remaining cost down from a 100% in-house UK/USA base: BPO labour arbitrage to ±60% of cost, then Trilogy DBOT ownership to ±45% of cost. Innovation and tech deflection can unlock further savings beyond the DBOT base.

Proven Results — Quantified Outcomes Over 36 Months

Our clients typically experience a compounding effect across three value drivers. These aren't projections — they are based on realised results across our existing client base operating in South Africa.

20–30%

Margin removal savings — immediate reduction versus offshore BPO by eliminating vendor markup.

15–20%

Digital & AI deflection — efficiency gains from automation, self-service and AI resolution.

30–50%

Total cost reduction — combined impact over 36 months as automation matures and scales.

Turnkey Build

Trilogy stands up the site and the technology stack as a single programme — construction through to telephony — so the captive is ready to operate, not merely occupied.

Site build-out

- Construction, electrical, fire & HVAC
- Floors, furniture & fittings, joinery
- Signage, windows and acoustics
- Facilities contingency and professional services

IT build-out

- Access control, AV and CCTV security
- Networking, LAN, switches and connectivity
- Computers, laptops, equipment and telephony
- IT professional services and contingency

Turnkey Staffing

We staff the senior in-country team, operations layer and business services so the centre can run — then transfer that capability with the operation.

Exec staffing

Country Executive, Managing Director, Transition Manager, HR Director and IT Director.

Operations staffing

Senior Operations Manager, Ops Manager, Team Leaders, Quality Auditors, HR Admins, IT Support, MIS and agents.

Business & facilities

Business registration & legal, finance, project and business management, plus facilities usage, equipment, personnel, security, cleaning, connectivity, rental and utilities.

Team + Experience

Trilogy is tenured BPO executives and managers with 25+ years of experience each, who have built more than 30 contact centres worldwide. The most recent engagement helped a global

BPO build 1,000 seats over 24 months, with the first 100 seats live in six weeks.

We know the local business environment, socio-economic conditions, laws and compliance, vendor ecosystem and cost parameters. That is how a GCC is established accurately and cost-effectively — people, facilities, process and technology together.

> *"We know where the pitfalls and the golden nuggets are by now." We mitigate your localisation risks.*

The same management team built three BPO companies that were sold to international groups:

CCN

100 → 850 seats in 3 years. 15% EBITDA. Differentiation: VIP service at a higher price for higher quality. Brands included Virgin Media, British Gas, Mercedes-Benz, BMW, GM and Southern Sun.

Aegis South Africa

Started with 4 people; grew to 2,000 seats in 5 years. 15% EBITDA. Differentiation: SMART people and SMART technology. Brands included AIG, the National Lottery, Department of Home Affairs and Telkom Mobile.

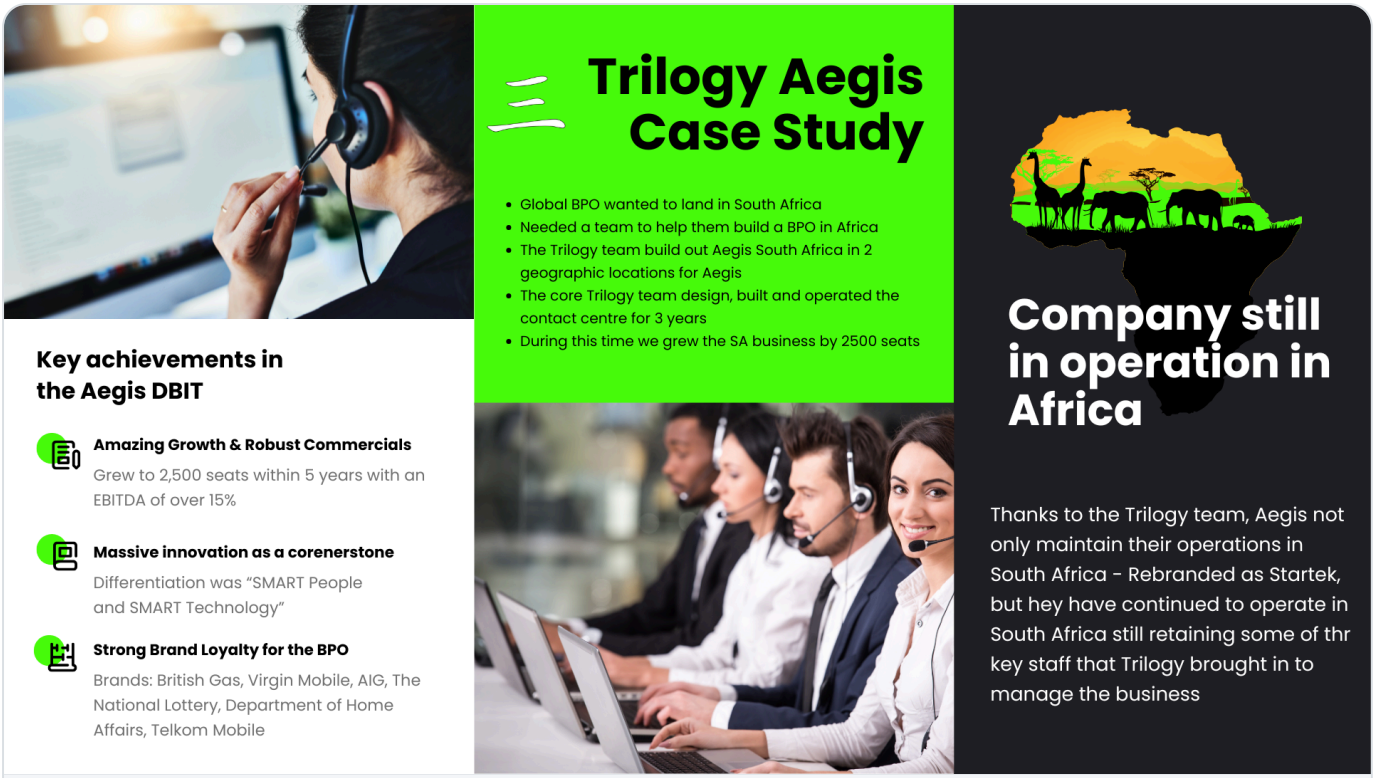

Digital Tribe / Codified

Started in 2021 with 3 people; grew to 1,000 seats in 3 years. Differentiation: digital and autonomous platforms. Brands included Ascensos, ALDI and JD Sports. Codified is a BOT pioneer in SA, an AWS Global partner and one of two Infobip development partners globally.

Case Studies

Two DBIT programmes that show the model at scale — Aegis (now Startek) and Ascensos in Cape Town.

Case Study — Aegis South Africa

Aegis DBIT — design, build and operate in two South African locations, then a lasting in-country operation.

A global BPO needed a team to land in South Africa. Trilogy designed, built and operated Aegis South Africa in two geographic locations, ran the contact centre for three years, and grew the SA business by 2,500 seats.

- Grew to 2,500 seats within 5 years, with EBITDA of over 15%.
- Differentiation: SMART people and SMART technology.
- Brands included British Gas, Virgin Mobile, AIG, the National Lottery, Department of Home Affairs and Telkom Mobile.
- The operation continues in Africa, rebranded as Startek, still retaining key staff Trilogy brought in to manage the business.

Case Study — Ascensos

Ascensos DBIT — Cape Town capability centre, first 100 FTEs live in six weeks, then a four-site scale-up.

Trilogy's DBIT team assisted Digital Tribe and Ascensos to establish a capability centre in Cape Town, with the first 100 FTEs going live within six weeks. The team designed and built a centre of excellence, oversaw and ran the operation for two to four years, and handed over a world-class operation to the incumbent.

- Built 1,500 seats over 3 years across 4 locations.
- Delivered over $6 million in refunds from structuring and administering government incentives.
- Built a leadership team that remains in place and runs Ascensos South Africa.
- Won multiple contact-centre performance awards, every client contract tendered for, and nationwide recognition as a top place to work.
- Stood up incentive schemes that reduced the cost of operating in SA, and an innovation platform to reduce voice dependency.

Commercial Models

Trilogy provides DBIT on the commercial model that fits the client — always with a path to ownership, not a locked-in BPO tax.

Open-book build + management fee

Detailed open-book cost and budget with full transparency, plus a management fee. You see the build and the run-rate.

Cost per productive hour

All costs rolled into a per-productive-hour rate. If you are a BPO taking the centre to market, you add your own margin.

Facility managed services (OPEX)

Full facility managed services as an OPEX model. Trilogy provides the CAPEX for the build so you are not funding the fit-out up front.

> *Trilogy will assist you to apply and administer DTIC job-creation grants — circa $7,500 per job created — from application through to payment.*

- CAPEX model — build owned infrastructure for long-term strategic control.
- OPEX model — minimise upfront investment with operational-expense treatment.
- Government incentives — leverage available job-creation grants and incentives per FTE.

Risk Mitigation

South Africa offers political stability, a legal framework aligned with Western standards, same-day time-zone overlap with European markets, and a mature BPO talent ecosystem with strong English proficiency. DBIT is how those advantages are converted into a live captive without absorbing localisation risk yourself.
